

Desktop IT Cleaning

Your Desktop IT equipment (screens, keyboards, phones, mouse) – along with the staff who use the equipment – are the front line components that keep a business functioning. It's good business & common sense to keep the IT kit clean and minimise staff contact with dust/dirt/bacteria.

75% of the UK workforce are, in some form, sat working on Desktop IT. Building up grime, dirt, viruses, bacteria, mould and fungi ...to the extent that an office keyboard has around a x14 higher concentration of germs than the office toilet seat. And, of course, prolonged keyboard life directly means less keyboard plastic (which is generally unrecyclable) will be thrown away into landfill.

24/7 Availability

We can work alongside your staff during work time or attend during out-of-office-hours.

Healthy Workstations

Range of specialist wipes, sprays & hand sanitisers (option to brand in your logo) for 'post clean' staff use.

Pristine Office Environment

Financial Services, Public Sector, SMEs – we adapt our service for clients with as few as 10 workstations to those that have 2000+.

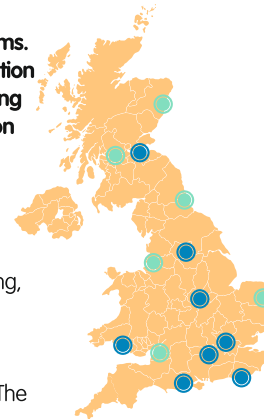

Less Unrecyclable Waste

Clean Desktop IT means less downtime, helps reduce staff sickness and reduces disposability – clean equipment works better, for longer.

Network

Techclean is accredited with ISO 9001:2015 Quality Management Systems. This reflects in the reporting & certification we feedback to all of our clients; logging work completed, dust & germ reduction impact, system improvements and flagging up advisory notices.

As a Living Wage employer, techclean staff are a fully contracted part of the team – enjoying regular upskilling, training, best practice updates and each has safecontractor accreditation. Our Data Centre team members have undergone internal exam qualification process too. The regional network ensures our clients are serviced by approachable, friendly, local staff who are familiar with working inside modern office environments.

Skilled staff, audited quality control and customer service

Techclean has been a leader in specialist IT equipment cleaning services since 1983, deep cleaning Desktop IT, Server Equipment & Data Centres.

Techclean works tightly with Office Managers, Facilities Managers, IT Infrastructure Professionals and Data Centre Managers, tailoring deep clean solutions that offer audited, tested and certified applications to business critical pieces of IT kit.

Our employees are trained, regularly upskilled and pride themselves on their individual responsibility of reliability, friendliness, skill & professionalism.

Green IT

Carbon offset policy. Sensibly sourced non-bleached detergents. Staff trained to use efficient & 'no waste' work processes.

Staff with Advanced Training

Team members are trained, familiar with IT & attain (at least) Living Wage status – no agency workers 'bussed in'.

Less Unrecyclable Waste

Clean Desktop IT improves employee engagement, helps reduce staff sickness and reduces disposability – clean equipment works better, for longer.

Audited Work Processes

Your IT equipment is delicately and professionally handled. We regularly audit our processes and are proud to be QM ISO 9001:2015 accredited.

Server/Comms Room & Data Centre Cleaning

Our highly specialised and dedicated Data Centre (DC) team works within Comms/Server Rooms & Data Centres, large and small.

Providing audited cleaning services for dust and particle decontamination and deep cleaning solutions to servers, cabinets, racks, cabling, floors & ceilings – our quality management processes comply to our ISO 9001:2015 certification.

DC Best Practice & Compliance

Rigorous deep clean processes adhere to our QM ISO 9001:2015 certification. Safecontractor status. RAMS provided. Post clean air particle reports available.

Skilled Technical Cleaning

Servers, Racking, Cabinets, UPS, HVAC, Lighting, Floors & Sub Floor voids.

Green IT

Carbon offset policy. Sensibly sourced detergents. Staff encouraged to use efficient & 'no waste' work processes.

Security

Advanced staff training, exam qualification process and BPSS vetting.

Dry Misting

Cleanse your place of work with Dry Misting. Safe to use, clinically proven & an eco-friendly way to disinfect germs – including Flu & Cold (Rhino) Virus, Norovirus, Legionella, E Coli & Salmonella.

Skilled & friendly operatives – each trained & qualified to apply Dry Misting disinfection standards on site. Helping your compliance, reinforcing your employees' health & well-being and ensuring your workplace is clean to deliver its product.

In use across many sectors

Used in Offices & Call Centres, Health (Dental, Vets, GP Surgeries), Education/Residential Premises and Hospitality/ Catering as part of deep clean cycles, infection prevention and relocation.

Hard-to-access areas

Cleaning work surfaces, desks, keyboards/phones, hand rails & door handles, walls & keypads. Disinfects hard-to-access areas such as store cupboards, refrigeration, store rooms & behind furniture.

Non-Hazardous

Non-Hazardous under UK/EU rules for the production and declaration of hazardous materials. BS EN ACCREDITED. Skin pH neutral, Dry Misting contains no alcohol or bleach & is non flammable.

Immediate results

The sanitised workspace is ready to use immediately after disinfection. Staff instantly reoccupying their workstations means minimal downtime. Zero residue will be left on surfaces & equipment.
